

# FGC reinforces its service during the Mobile World Congress

- Ferrocarrils is putting on extra services and doubling the capacity of its trains to cater for the demand generated by the Mobile World Congress
- Contingency plans have been made at stations in coordination with the Mossos d'Esquadra (Catalan police), GSMA and Fira Barcelona to deal with the different mobility issues that might arise
- FGC will once more be the principal means of transport to get to the congress and connect the two Fira Barcelona sites

Ferrocarrils de la Generalitat de Catalunya is getting ready once again to be the principal means of transport to connect the congress venues of Plaça Espanya in Barcelona and Fira Gran Via in L'Hospitalet de Llobregat during the thirteenth Mobile World Congress, to be held in Barcelona from 26th February to 1st March.

The Baix Llobregat Metro, which links the two nerve centres of the congress with a journey time of just 6 minutes, becomes a fast line for these 4 days, the most direct way to get to the centre of Barcelona. The reinforcement operation planned by FGC consists primarily of: increasing the frequency of trains on line L8 (Molí Nou Ciutat Cooperativa) by 30 services a day, doubling the capacity of trains from 3 to 6 cars, redesigning mobility in the vestibules of the stations at Pl. Espanya and Europa | Fira to cater for this demand and reinforcing customer service with more staff, signage, special announcements and social networks.

■ Press release ■

---

These measures are intended to provide the best possible service to facilitate mobility for congress attendees and regular users of the Llobregat-Anoia line, designed to assure maximum capacity on trains to cope with 8,000 people an hour. Taking into account forecasts for attendance at the congress by Fira de Barcelona and GSMA, the reinforcement measures set out to provide a service for as many users as possible while guaranteeing safety and passenger comfort at all times.

Moreover, FGC has made a range of contingency plans at stations, in coordination with the Mossos d'Esquadra (Catalan police), GSMA and Fira Barcelona including the different scenarios and measures necessary to cope with the different mobility and safety issues that might arise. In this respect, stations will have mixed teams of the FGC's own staff, directing operations, and people to deal with congress attendees provided by the GSMA organisers.

As in previous years, large numbers of congress attendees are expected to choose FGC for their return journey between the stations at Pl. Espanya and Europa | Fira. At the last event, in 2017, the congress led to a 132% increase in travellers between the two stations, with trains carrying 184,298 passengers.
