

**Identi
CAT**

We're pushing forward to full digital citizenship:
empowered, enabled and **protected**

Identity in the hands of citizens

Catalonia will become the first country to create a **decentralised, self-sovereign digital identity** platform for its citizens

WITH THE NEW IDENTICAT PLATFORM:

Citizens, through their devices, become **issuers, owners, managers and custodians** of their own data, with **full legal validity and privacy**

The public administration becomes the **validator**

Identification with maximum security and privacy

IdentiCAT will allow people to identify themselves in any activity that involves a **digital relationship** with the **public or private sector**

Citizens will be able to prove any attribute of their identity while **maintaining their privacy at all times**

Blockchain and DLT: a cutting-edge technological foundation

IdentiCAT will be based on **distributed ledger technology** (DLT) — the same tech used to implement blockchain solutions

The architecture of the system provides a layer of **security, immutability, resilience and inalterability**
